

BioRePeelCl3 protocol of use

1. Degrease/ clean the zone of interest with specific deteration products (acetone, surfactants...)
2. Shake the ampoule for a few seconds until colour turn green for a temporary emulsion.
3. Using a syringe, prelate the quantity of product for the treatment without removing the butyl stopper.
4. Apply the product with nitrile gloves until it is completely absorbed.
5. Leave BioRePeelCl3 FND for 3-5 minutes
6. Clean the zone with a gauze soaked with boiled water, saline or neutralizer (for sensitive skin we always recommend using neutralizer post procedure)
